

Reviewing DOE & Sandia's Long-Term Environmental Stewardship Plan

After 18 months of effort, the Department of Energy's Kirtland Area Office, Sandia National Laboratories, and various community representatives invite you to review the first draft of a plan to provide long-term environmental protection for the Labs' neighbors.

This community involvement project is under way now to ensure that we protect future generations.

The cleanup of Sandia environmental sites, located on Kirtland Air Force Base, is moving toward closure. But complete restoration won't be possible at all sites. While most sites will be returned to a natural state, a long-term program is needed for the few sites that remain.

Several dozen local stakeholders, including individual citizens and those representing a diversity of

Sandia National Laboratories
Environmental Restoration Project

groups, governments and organizations, have been helping Sandia to find ways to make Stewardship work.

Join us on August 29 to visit with the participants, enjoy a light snack or soda, and get a first view of the draft plan.

An essential part of this meeting will be the opportunity for dialogue with other interested citizens. Please, feel free to join us and discuss these issues.

6:30 - 8:30 p.m.
